

Odor Control Product from InstaCote, Inc.

ICOE Is The Natural Odor Control Agent Designed To Eliminate Odor At The Source.

InstaCote Odor Eliminator (ICOE)

ICOE is an all natural product used to control odors. While most odor agents just cover odor with a perfume masking agent, ICOE is designed to eliminate odor at its source, by inhibiting the growth of odor causing bacteria in both aerobic and anaerobic conditions.

How It Works

ICOE is a non-toxic, non-hazardous product which increases the biological activity of naturally occurring bacteria. ICOE introduces a facultative bacteria to promote increased aerobic digestion and is designed to control hydrogen sulfide produced by anaerobic bacterial ingestion.

Easy to Use

ICOE will arrive on site as a highly concentrated liquid, engineered to work in a highly diluted form. ICOE is designed to be injected directly into a primary sludge pick-up pump. Once injected and properly mixed, you will notice an immediate reduction in odor.

Waste Water Treatment Facility

Compost Piles

ICOE has been successfully used in the following areas :

- Water Treatment Facilities
- Biofilters–Decreases ammonia content
- Filter cake presses–Enhances de-watering
- Compost piles–Use while processing
- Leachate ponds-Prevents ponds from turning septic
- Tipping floors, waste boxes, & transfer vehicles-
Excellent cleaning solution
- Solid manure in livestock pens–Reduces fly population
